

Artem Sidnev

AI Platform / Backend Engineer | AI Agents, RAG, Automation, Developer Productivity

a.sidnevar@gmail.com | Telegram | LinkedIn | GitHub | Habr

Summary

Backend engineer focused on AI-enabled automation, internal platforms, developer productivity, and practical agent workflows. Nearly 3 years of experience building backend systems, RAG assistants, AI-assisted code review, CI-based refactoring automation, n8n workflows, data-intensive services, and local-first AI-agent tooling. Strong in Java/Kotlin, Go, Python, TypeScript, ClickHouse, PostgreSQL, GitLab CI, and product-oriented automation.

Core Skills

AI/Agents: AI agents, RAG, AI-assisted code review, CI refactoring automation, onboarding assistants, prompt/workflow design

Backend: Java, Kotlin, Go, Python, TypeScript, Spring Boot, FastAPI, PostgreSQL, ClickHouse, Redis, Kafka

Developer Productivity: GitLab CI, internal tools, skill libraries, workflow automation, n8n, documentation, test stabilization

Platforms: local-first tooling, provider adapters, execution artifacts, monitoring UI concepts, agent transparency, Docker

Experience

Software Engineer (Backend) | T-Bank

Jan 2025 – Present

- Build backend systems for a cashback targeting platform while also introducing AI-assisted workflows into engineering and operational processes.
- Introduced AI-assisted code review in GitLab to improve feedback loops and reduce repetitive review work.
- Built an AI-driven CI job for automated refactoring and draft merge request preparation.
- Created n8n automations for management workflows and a RAG-based onboarding assistant for interns.
- Contributed to an internal skill library for bank-wide AI workflows and reusable agent capabilities.
- Worked on personalized AI assistant concepts that use transaction and partner data to recommend relevant restaurants, cafes, and leisure places.
- Built partner-level targeting over about 30M transactions per day and 1.5 years of history; estimated annual business impact reached about \$600K+.
- Migrated audience-building workflows to an internal ClickHouse-as-a-Service environment, making a critical scenario about 5x faster.

AI Office and Agent Tooling | Independent Projects

2024 – Present

- Built personal AI-office workflows for research, financial modeling, idea generation, automation, and structured execution.
- Worked with OpenClaw-style agent workflows, monitoring, Grafana-style observability, and UI concepts for transparent agent execution.
- Built token-saving tooling that reduced context/token usage by up to 60% in targeted workflows.

ARC | Local-First Platform for AI Agent Workflows

Open Source

- Built a local-first environment for safe and reproducible AI-agent work in code projects.
- Combined a Go-based CLI runtime, Wails desktop shell, adapters for multiple AI providers, project memory, and execution artifacts in one product.
- Implemented context, memory, and execution-rule management to reduce request cost, make agent behavior more predictable, and simplify step-by-step verification.
- Reduced context load by 48% without lowering response quality.
- Embedded diagrams, mini-apps, demos, and simulations directly into agent responses so outputs are easier to explore, understand, and validate.

Freelance Backend and Automation Projects

Jun 2023 – Present

- Built backend and automation products including Telegram Mini Apps, booking flows, admin panels, integrations, and production deployment setups.
- Integrated FastAPI, SQLAlchemy, PostgreSQL, Redis, Telegram bot runtime, React/Vite/Tailwind, Docker Compose, nginx, and CI/CD.

Education

Canisius University | Bachelor of Computer Science

Additional coursework: Harvard CS50, MIT OpenCourseWare Algorithms, freeCodeCamp Java, freeCodeCamp Spring
