

Artem Sidnev

Data Backend Engineer | ClickHouse, Analytics Workflows, Data-Intensive Services

a.sidnevert@gmail.com | Telegram | LinkedIn | GitHub | Habr

Summary

Backend engineer focused on data-intensive systems, analytical workflows, partner targeting, and business-facing data products. Nearly 3 years of experience building backend services over large transaction flows, ClickHouse analytical scenarios, real-estate analytics, geocoding workflows, searchable catalogs, and automation around data-heavy operations. Strong in Java/Kotlin, Python, SQL, ClickHouse, PostgreSQL, Kafka, Redis, FastAPI, and Spring Boot.

Core Skills

Data/Analytics: ClickHouse, PostgreSQL, SQL, data-intensive systems, analytics workflows, market analysis, geocoding, searchable catalogs

Backend: Java, Kotlin, Python, Go, TypeScript, Spring Boot, FastAPI, REST APIs, Redis, Kafka, SQLAlchemy

Product Data Domains: cashback targeting, partner audiences, transaction-based logic, real-estate analytics, CRM, partner integrations

Automation: CI/CD, GitLab CI, Docker, n8n, Telegram Bots, admin panels, workflow automation

Experience

Software Engineer (Backend) | T-Bank

Jan 2025 – Present

- Build backend systems for a cashback targeting platform that processes partner audience data and helps deliver relevant partner-funded offers to customers.
- Built partner-level targeting by customer spend and income on a data flow of about 30M transactions per day across 1.5 years of history; estimated annual business impact reached about \$600K+.
- Contributed to migrating audience-building workflows to an internal ClickHouse-as-a-Service analytical environment, making a critical scenario about 5x faster.
- Moved non-standard audience-building processes off the legacy stack and into a more maintainable analytical environment.
- Automated partner-region substitution in audience setup, removing 10–15 minutes from a single run and saving up to 40–60 hours of manual work per month.
- Added early validation to critical targeting scenarios, reducing diagnosis time for typical issues by 20–40 minutes.
- Worked on personalized AI assistant concepts that use transactions and partner data to recommend relevant restaurants, cafes, and leisure places.

Commercial Real Estate Analytics Platform | Large Real Estate Agency

Aug 2024 – Aug 2025

- Built backend and automation workflows for a commercial real-estate analytics platform combining auction data, CIAN listings, geocoding, a Telegram bot, an admin panel, and a searchable object catalog.
- Enabled realtors to evaluate property economics in about 10 minutes, including sale and rental profitability, key metrics, cash flow, yield, and payback period.
- Enabled district-level market analysis in 7–10 minutes, replacing manual market monitoring with structured data workflows.
- Improved object discovery and operational navigation through admin tooling and a structured catalog.

Freelance Backend and Automation Projects

Jun 2023 – Present

- Built backend systems and Telegram Mini Apps for booking, loyalty, service-slot discovery, and operational workflows.
- Implemented YClients booking and loyalty integration logic, including booking records, match result confirmation, Elo rating, bonus debit/credit operations, and retry handling for failed settlement.
- Integrated FastAPI, SQLAlchemy, PostgreSQL, Redis, Telegram bot runtime, React/Vite/Tailwind, nginx, Docker Compose, and CI/CD.

ARC | Local-First Platform for AI Agent Workflows

Open Source

- Built context, memory, and execution-rule management for AI-agent work in code projects; reduced context load by 48% without lowering response quality.
- Combined a Go CLI runtime, Wails desktop shell, provider adapters, project memory, and execution artifacts in one product.

Education

Canisius University | Bachelor of Computer Science

Additional coursework: Harvard CS50, MIT OpenCourseWare Algorithms, freeCodeCamp Java, freeCodeCamp Spring
