

Artem Sidnev

Platform / DevEx Engineer | CI/CD, Internal Tools, Automation, Backend Systems

a.sidnevar@gmail.com | Telegram | LinkedIn | GitHub | Habr

Summary

Backend engineer oriented toward platform engineering, developer experience, internal tooling, CI/CD, automation, and reliability improvements. Nearly 3 years of experience improving backend workflows, reducing manual operations, stabilizing tests, documenting systems, building deployment setups, and introducing AI-assisted developer productivity tooling. Strong in GitLab CI, Docker, nginx, FastAPI, Spring Boot, PostgreSQL, Redis, ClickHouse, and practical automation.

Core Skills

Platform/DevEx: internal tools, CI/CD, GitLab CI, test stabilization, documentation, workflow automation, onboarding tooling

Infrastructure: Docker, Docker Compose, nginx, tunnels, production deployment setups, monitoring concepts, Redis, PostgreSQL

Backend: Java, Kotlin, Python, Go, TypeScript, Spring Boot, FastAPI, REST APIs, ClickHouse, Kafka

Automation/AI: n8n, RAG assistants, AI-assisted code review, CI-based refactoring, agent execution transparency

Experience

Software Engineer (Backend) | T-Bank

Jan 2025 – Present

- Build backend systems for a cashback targeting platform and improve internal engineering workflows around validation, CI, documentation, and automation.
- Accelerated the main CI pipeline by 5–7 minutes and helped reduce flaky tests to improve development feedback cycles.
- Added early validation to critical targeting scenarios, reducing diagnosis time for typical issues by 20–40 minutes.
- Helped remove legacy code and covered backend processes with documentation for easier maintenance, onboarding, and knowledge transfer.
- Automated partner-region substitution in audience setup, removing 10–15 minutes from a single run and saving up to 40–60 hours of manual work per month.
- Introduced AI-assisted code review in GitLab, an AI-driven CI job for refactoring and draft merge request preparation, n8n automations, and a RAG onboarding assistant for interns.
- Resolved a major incident in a document workflow service, eliminating reputation risk and helping prevent potential financial loss.
- Migrated audience-building workflows to an internal ClickHouse-as-a-Service environment, making a critical scenario about 5x faster.

Freelance Platform and Automation Projects

Jun 2023 – Present

- Built deployable Telegram Mini App systems with FastAPI backends, PostgreSQL, Redis, React/Vite/Tailwind frontends, nginx, Docker Compose, and Telegram bot runtime.
- Implemented local and public preview workflows using HTTPS LAN setup, ngrok/cloudflared-style tunnels, webhook setup scripts, and production compose configurations.
- Built admin, partner, and customer flows for booking and service-slot products, including operational tooling and demo-data workflows.
- Integrated YClients booking and loyalty flows with retry handling for failed bonus settlement scenarios.

ARC | Local-First Platform for AI Agent Workflows

Open Source

- Built a local-first platform for reproducible AI-agent work with a Go CLI runtime, Wails desktop shell, provider adapters, project memory, execution artifacts, and rule management.
- Implemented context and execution controls to make agent behavior more predictable and reduce request cost; reduced context load by 48% without lowering response quality.

Commercial Real Estate Analytics Platform | Large Real Estate Agency

Aug 2024 – Aug 2025

- Built backend automation, admin tooling, Telegram workflows, and a searchable catalog for real-estate analytics.
- Enabled realtors to evaluate property economics in about 10 minutes and district-level markets in 7–10 minutes.

Education

Canisius University | Bachelor of Computer Science

Additional coursework: Harvard CS50, MIT OpenCourseWare Algorithms, freeCodeCamp Java, freeCodeCamp Spring
