

Artem Sidnev

Backend / Platform Engineer | Java, Kotlin, Spring Boot, ClickHouse, AI Automation

✉ a.sidnevar@gmail.com | 📞 | 🌐 | 📧 | 📧

Summary

Backend / Platform Engineer with 3+ years of experience building data-intensive services, internal platforms, and AI-enabled developer tools. Strong in Java/Kotlin, Spring Boot, ClickHouse, PostgreSQL, Kafka, Redis, Kubernetes, Docker, GitLab CI/CD, FastAPI, gRPC, REST APIs, microservices, AI agents, RAG, LLM applications, n8n, Telegram Mini Apps. Current focus: banking cashback targeting, partner-funded offers, analytics, reliability, and engineering productivity.

Core Skills

Backend: Java, Kotlin, Go, Python, TypeScript, Spring Boot, FastAPI, gRPC, REST APIs, Microservices, SQLAlchemy

Data & Infra: PostgreSQL, ClickHouse, Kafka, Redis, Docker, Kubernetes, GitLab CI/CD, Grafana, nginx

AI / Automation: AI Agents, RAG, LangChain, OpenAI, LLM Applications, n8n, AI Code Review, CI Refactoring Bots, Developer Productivity

Integrations: React, Next.js, Telegram Mini Apps, Telegram Bot API, YClients API, WebSocket

Experience

Software Engineer (Backend) | T-Bank

Jan 2025 – Present

- Led backend development for cashback targeting platform in Java/Kotlin/Go/Spring Boot: partner audience processing, partner-funded offer delivery, gRPC/microservices. Spend/income targeting over 30M transactions/day, 1.5 years of history; annual business impact \$600K+.
- Migrated audience building to ClickHouse-as-a-Service: 5x speedup on critical analytics, moved non-standard processing off legacy infrastructure. Automated partner region setup: 40–60 hours of manual work saved per month. Early validation for targeting scenarios: 20–40 min faster diagnosis. Removed 80% legacy code, achieved full documentation coverage.
- CI/CD: accelerated pipeline by 30% (20 min/run), eliminated all flaky tests.
- AI-assisted engineering: code review (35% time saved, +120 issues/wk), CI refactor bot, RAG onboarding agent (-40% onboarding time, -60% senior dev interruptions), n8n campaign automation (-70% setup time), personalized AI recommendation assistant, bank-wide code agent skills library. AI Office (OpenClaw + Grafana): 60% token cost reduction, 40% engagement lift, 8+ hours of analysis saved per week. Kubernetes cluster management.

Backend & Automation Engineer | Large Real Estate Agency

Aug 2024 – Aug 2025

- Commercial real estate analytics platform: auction + CIAN data integration, geocoding, Telegram bot, admin panel, searchable catalog. Property economics in 10 min, district market analysis in 7–10 min. Reduced manual data collection by 90%.

Backend & Automation Engineer | Freelance / Pet Projects

May 2022 – Present

- Svobodno (URVI): Telegram Mini App for last-minute service slot booking (Go/Python, FastAPI, PostgreSQL, Redis, React, YClients). Onboarded 3 major partners, reduced slot vacancy by 35%, increased partner revenue by 20%, improved booking conversion by 25%.
- Double Kiss: booking, match, Elo rating, and loyalty flows with webhook integration, bonus debit/credit settlement, retry handling, and deployment automation.

Selected Projects

ARC | Local-First AI Agent Platform (Go, Wails)

Open Source

- Local-first environment for reproducible AI-agent work with provider adapters, project memory, execution artifacts, context controls, and rule management. Reduced context load by 48% without lowering response quality.

ProofForge | Peer Accountability Platform (Go, Next.js, PostgreSQL, pgvector, Redis, MinIO)

Open Source

- Platform for goal tracking, proof workflows, AI growth dossiers, team workspaces, 1:1s, and review readiness. Peer accountability increased goal completion by 45%, AI-generated growth dossiers save 5+ hours per 1:1 prep.

Education

Central University Moscow | Bachelor of Computer Science

Java/Spring

Coursework: Harvard CS50, MIT OCW Algorithms, freeCodeCamp
